

TAKE ADVANTAGE OF SHAREPOINT IN THE CLOUD

Migration Manager for SharePoint - Dedicated Cloud Edition

If you are looking to move content into SharePoint Online, Office 365 Standard or a hybrid-cloud scenario between on-premises and shared cloud, please visit the [Migration Manager for SharePoint](#) page to learn more.

Metalogix Migration Manager for SharePoint – Dedicated Cloud Edition simplifies moving, upgrading and managing your SharePoint content in dedicated environments with its powerful combination of capabilities. Metalogix is a migration Independent Software Vendor (ISV) that has been approved by Microsoft for installation in Office 365 Dedicated after successfully passing the Microsoft SharePoint® Online Code Analysis Framework (MSOCAF) testing. We work closely with Microsoft teams as they provision and configure your Office 365 Dedicated environment and can guide you through the installation process.

- Migrate Permissions
- Migrate Web Part Content
- Connect to multiple sites
- Work remotely
- Batch your work
- Compliant
- PowerShell Enabled
- Migrate from live sites and unattached content databases
- Distribute the Workload
- Compare your data

FEATURES

Easy to use

Run your migration with a tree-based, copy-and-paste-style user interface that is similar to the familiar Windows Explorer user interface.

Reorganize or re-template sites during migration

Re-define site structure while migrating. Split Sites and Site collections into multiple targets and re-template Sites. Administrators and content owners can define what content is migrated.

Migrate all list types

Migrate Document Libraries, Issues, Tasks, Contacts, Announcements, Discussions and Custom Lists while preserving views, metadata, and user-edit information.

Retain your valuable data

Preserve views, version chains, metadata, and user-edit information.

Migrate Permissions

Map and migrate site permissions from WSSv2/SPS 2003, WSSv3/MOSS 2007, and SharePoint 2010, SharePoint Foundation, SharePoint Online, BPOs or Office 365 easily.

Migrate Web Part Content

Migrate out-of-the-box and custom web part content from WSSv2/SPS 2003, WSSv3/MOSS 2007, SharePoint 2010 SharePoint Foundation, SharePoint Online, BPOs or Office 365 sites.

Connect to multiple sites

Connect to multiple SharePoint sites, across any number of servers, for easy consolidation or distribution of your SharePoint data.

Work remotely

Do all the heavy lifting for your SharePoint migration from the convenience of your own machine. Metalogix Migration Manager for SharePoint—Dedicated Cloud Edition connects to any SharePoint site that you can access with your browser -- even those outside your organization's intranet.

Batch your work

Batch multiple list migration operations for convenience and re-run at any time. Run your migrations at night and view the results / logs in the morning. Once a job is created, write a PowerShell script and customize or execute it along with other admin processes.

Compliant

Run migration activity through the supported SharePoint APIs. There are no un-documented, direct writes to the SharePoint database.

PowerShell Enabled

Access and extend Migration Manager for SharePoint— Dedicated Cloud Edition functionality via PowerShell commandlets, to script and automate all migration functionality.

Migrate from live sites and unattached content databases

Migration Manager for SharePoint — Dedicated Cloud Edition provides native capabilities to migrate directly from unattached content databases to live sites, eliminating the need to build temporary farms. Simply connect to an unattached database, copy the data, and migrate it into a live SharePoint environment.

Distribute the Workload

Use Migration Manager for SharePoint—Dedicated Cloud Edition to delegate and distribute migration efforts across the organization to individual departments or content owners. This reduces IT workload, enhances buy-in on the new target system, and improves decision-making in terms of content re-organization. You can manage a distributed workload because Migration Manager for SharePoint—Dedicated Cloud Edition security trims user access via SharePoint permissions.

Compare your data

Compare data between environments or between SharePoint versions easily, with Migration Manager for SharePoint—Dedicated Cloud Edition's powerful differential reporting capabilities. Compare content between a live site and QA, or between a backup file and the live SharePoint site, to instantly see what has been added, modified or deleted.

BENEFITS

Business Benefits

- Migrate SharePoint Sites, Lists and Libraries between servers with full fidelity
- Upgrade from SharePoint 2003 or SharePoint 2007 to SharePoint 2010 or Office 365
- Re-organize or re-template your SharePoint content
- Manage your upgrade with zero downtime
- Migrate to the cloud or hosted SharePoint environments and reduce infrastructure costs
